## SUMMARY

I'm a year 1 MPhil student in the Hong Kong University of Science and Technology (HKUST) major in Computer Science. I'm a proud member. My research interest lies within the intersection of blockchain and cryptography.

## SKILLS

**Languages:** Solidity, Python, JavaScript, HTML, C++, C.

**Technologies:** Blockchain, Cryptosystems, Django, Artificial Intelligence, Computer Vision.

## EDUCATION

09/2023 – Present	<b>MPhil in Computer Science</b> • Supervisor: Prof. Amir K. Goharshady • A member of the ALPACAS Research Group	HKUST
09/2019 – 07/2023	<b>BEng in Computer Engineering</b> • Minor in Big data Technology • Awarded the 2019-2020 HKUST School of Engineering Scholarship	HKUST

## PUBLICATIONS

ICBC'24	<b>Blind Vote: Economical and Secret Blockchain-based Voting</b> A.K. Goharshady, Z. Lin	(Under Review)
---------	---	----------------

## PROJECTS

09/2023 – 01/2024	<b>Blockchain-based E-voting system using Blind Signatures</b> Designed and implemented a voting system on blockchain (Ethereum) by utilizing the technique of blind signature. The protocol achieves untraceable anonymity and other properties such as verifiability, transparency, completeness, etc., while being at least 40% more efficient than other existing e-voting systems in terms of gas cost.	
08/2022 – 05/2023	<b>Advanced Video Analytics for Smart Carpark</b> Built a vacancy detection system for car parks using fisheye cameras and computer vision technologies. By applying transfer learning of the state-of-the-art yolov5 model, it achieves a wider angle of detection with high accuracy.	Github

## INTERNSHIPS

07/2022 – 09/2022	<b>AI &amp; Data Engineering Intern</b> • Developed MERN (MongoDB, Express, React Node.js) stack app that supports basic CRUD applications for recording patient information. • Exploratory data analysis on patient datasets to draw meaningful insights. • Built random forest regression model on predicting patient vitals, optimized model using automated hyperparameter tuning by GridSearchCV. • Data augmentation of the patient dataset using SMOTE, RandomOversampler and GaussianCopula from SDV. Synthesized data has a high similarity of >95% in distribution and <0.5 of bivariate correlation difference. MERN Stack / EDA / Random Forest Regression / Data Augmentation	Baronford & Associates
12/2021 – 02/2022	<b>Junior Developer</b> • Implemented a webpage for the company using HTML, JavaScript, and CSS. • Continuously improved the prototype interface and optimized user experience through trial and error and user feedback. • Worked in a team to build and fine-tune a Cantonese voice recognition system using DeepSpeech and CommonVoice corpus. HTML / JavaScript / CSS / Voice Recognition System	Radiance Tech International Ltd.

## FELLOWSHIPS

09/2023 – Present	<b>Postgraduate Studentship</b> HK\$18390/month	HKUST
-------------------	--	-------

## AWARDS

---

06/2023	<b>Professor Samuel Chanson Best FYP Award</b>
06/2023	<b>Industry Sponsored Best FYP Award</b>
11/2019	<b>Dean of Engineering Scholarship</b>

## COMPETITIONS

---

02/2022 – 03/2022	<b>Sony Tactile Technology Challenge 2022</b> <div><ul style="list-style-type: none"><li>• <i>Project Theme:</i> Apply Mixed Reality technology to museums to realize a full-scene virtual visual, auditory, and tactile experience for visitors.</li><li>• <i>Technical leader</i> of the team, responsible for analyzing cutting-edge technologies such as VR, AR, and haptic technology, and providing solid technical support by explaining the hardware and technical principles involved in the proposal.</li><li>• The proposal effectively grasps the user's pain points and successfully ranks among the top 50 in China for its leading creativity and feasibility.</li></ul></div>	<b>National Top 50</b>
----------------------	---	------------------------
